# Notes:

Six custom data structures will be created to hold relevant data, Available Employees, Available Equipment, Layoff, Vacation, MOB and Projects.

Project dates can be changed in the 'Manage Projects' section, which will determine the order they appear in the front-end.

Projects can be edited in the 'Edit Projects' section. Employees and Equipment can be added or deleted and project details can be edited.

This wireframe is for the back-end. The front-end will be outlined in another document and will be for displaying the database data only (there will be no interaction in the front-end for this version of the plugin.)

When a team member is added, they will be automatically added to the 'Add Project,' 'Edit Project' and 'Team Members' sections.

When a piece of equipment is added, it will be automatically added to the 'Add Project,' 'Edit Project' and 'Equipment' sections.

When a team member is put on vacation, or laid off, they will be removed from the pool of available workers in the 'Add Project,' 'Edit Project' and 'Team Members' sections.

When a piece of equipment is added to the MOB, it is removed from the pool of available equipment in the 'Add Project,' 'Edit Project' and 'Equipment' sections.

In this version, the plugin and WordPress installation will contain all of the relevant data. If the plugin or theme is uninstalled, or the website is moved, the data will be gone.

An 'Are You Sure' dialog will prevent inadvertent removal of project team members or equipment.
